

Innoschool

The InnoSchool's main goal is to strengthen social innovation and entrepreneurship among high school students by developing and implementing a highly innovative education system - ILS.

ILS is an innovative learning system specially designed to create awareness about social needs and improve the entrepreneurial skills of secondary schools' students. It combines traditional classroom teaching methods with digital elements and online simulation, thus helping build the next generation of social entrepreneurs and innovators.

Serious Game

SG, the core ILS element, is designed as a responsive web-based app, that can be used both in and out of class by the students in order to learn, play and accomplish their educational goals.

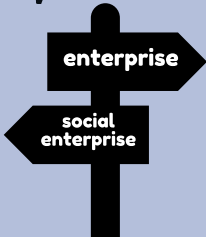

To verify the real impact of our education system, we implemented a Pilot, in more than 84 schools from the Danube region.

BEFORE PILOT

70% of participating students are familiar with the entrepreneurship concept

51.6% of the students can indicate the difference between an enterprise and a social business

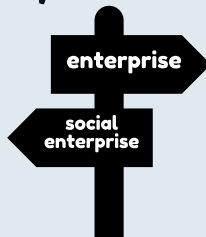

28.9% of the participating students can give examples of social entrepreneurs

AFTER PILOT

92% of participating students are aware of entrepreneurship and social entrepreneurship

88.2% of the students distinguish between an enterprise and a social business

49.2% of the participating students can list social entrepreneurs

"At school we typically learn the theory, from time to time we work on projects. Thanks to the game, we could have prepared our own plan or strategy for setting up the business. It was great experience and definitely I would like to go through it again someday."
Student testimonial

"With InnoSchool we were able to discover our strengths, develop something new and learn innovative ways of working. InnoSchool was a nice alternative to the actual lessons."
Student testimonial

"ILS as a tool, social entrepreneurship as such should become integral part of highschool curricula because they encourage development of students' key skills and competencies."
Teacher testimonial

"The ILS fulfils key educational goals by offering students important professional knowledge and lifelong skills. It helps them become active members of the society and the setting in which they (will) work and live."
